

The Michigan Department of Transportation is investing \$75 million to reconstruct six miles of eastbound and westbound I-94 in Wayne County. The reconstruction is taking place between Pelham Road in Allen Park, and Wyoming Avenue in Detroit. Included in the project is an upgrade to the freeway drainage system, installation of freeway lighting, and rehabilitation of 20 bridge structures within the project limits.

In order to expedite the project and reduce the inconvenience to the motoring public, two-way traffic is being shifted to the westbound side of the freeway.

Detour Routes

For traffic using eastbound I-94:

To enter eastbound I-94, use northbound US-24 (Telegraph Road) or points west of Telegraph Rd., Wyoming Ave. or points east of Wyoming.

Motorists can use eastbound Ford Road (M-153 ramp) or Michigan Avenue (US-12) to Wyoming to get onto eastbound I-94. Northbound M-39 to eastbound I-96 is also an option or southbound M-39 to northbound I-75. Both routes connect to eastbound I-94 in downtown Detroit.

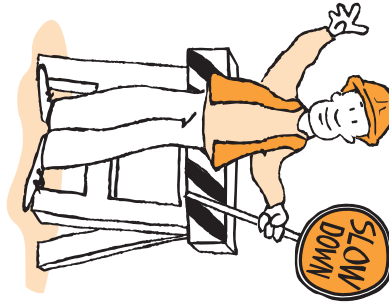

Traffic will not be able to use southbound M-39 to east 94.

For traffic using westbound I-94:

Traffic can exit at Addison, Schaefer, Rotunda, Oakwood and M-39. West of M-39, traffic can exit at Telegraph and all points west.

Traffic looking to enter westbound I-94 will be able to use Livernois, M-39 and Pelham.

The current traffic shift is expected to remain in place until July 2005.
